

System Requirements

The XCN Server for XC Connect and XC Vault may be installed on any one of the following three (3) host operating systems:

- Windows,
- Linux, or
- OS X.

No other collaboration solution provides you with this level of flexibility.

The XC Connect connector operates in a multi-platform environment and may be installed on as many desktops as you need. Connectors are available for Outlook, Entourage and Evolution.

If you are interested in XC Vault, you will be happy to know that the only thing you need is a browser.

Before you download Xchange Network software, please ensure that your computer meets the minimum system requirements shown below. More powerful computers (CPU MHz and RAM) will experience better overall system performance.
